

DON'T JUST TRACK YOUR RESOURCES. GET THE MOST OUT OF THEM!

Resource Management Software

Equipment and tools, material and crews. These are the things you need to manage on every job site. But what exactly does managing them involve?

It should involve much more than just location tracking. While knowing where your resources are at all times is a huge part of the equation, it's just as important to know how efficiently they're working and how well they're being put to use. This is especially critical when dealing with rentals.

That's why *The Dispatcher* focuses on more than just resource tracking. It focuses on helping you get the most out of your resources. How? By calculating equipment usage and tracking employee skills. By managing current events, while forecasting future needs and reviewing past performance. It even provides a powerful GPS option for advanced equipment monitoring and instant production analysis.

So chunk that whiteboard and those spreadsheets. It's time to manage your resources the right way.

Top Features

- Digital whiteboard with views of past, current, and future resource allocation
- Easy equipment and labor scheduling
- Resource tracking on Microsoft Bing Maps
- GPS option for live equipment tracking and instant production analysis
- Management of employee skills, small tools, and much more

Top Benefits

- Eliminate equipment idle time
- Decrease rentals
- Improve company communication
- Be a proactive, not reactive operation
- Stay on budget and schedule

"The Dispatcher changed the way we do dispatching. We didn't think about all the features you guys have covered, but now that we know about them, we can't live without them."

John Wheeler, Controller
Alpha Development Corp. (WA)
