

# VECTR GPS™

PUT THE POWER OF GPS ON YOUR JOB SITES.

## GPS Solutions

GPS technology can bring in an amazing amount of data to help run your fleet more efficiently and improve profits. But if this data is not presented in a way that's easy to access, read, and analyze, its potential is lost.

With **VectrGPS**, your raw GPS data is converted into useful information that automates your processes. Meter readings are pulled from the field to schedule preventative maintenance, production is analyzed in real-time, job costing becomes more accurate, and trucking operations run more smoothly.

**VectrGPS** integrates with the software you already use to run your business, and it was created specifically for the construction industry. It's exactly what you need to take your operations to the next level.

Count on HCSS for a full telematics solution.

## Top Features

- Integration with HCSS products
- Various data plans and hardware to fit your budget and needs
- Advanced analysis of equipment usage, production, and more
- Easy to use, web-based application
- Designed for the heavy construction market

## Top Benefits

- Streamline your trucking operations
- Curb theft and unauthorized usage of equipment
- True-up field reporting
- Automate preventative maintenance tracking
- Enjoy real-time reporting and costing

*"The new GPS is turning out to be a great asset. We can see the location of trucks in a split second when a customer or foreman calls in, and tell them how long before arrival of materials."*

Matt Aker, Project Manager  
Silver Star Construction (OK)
